## Projects

### Fleet Management Dashboard

A real-time fleet tracking and management platform designed to help operators and administrators monitor vehicle locations, optimize routes, and improve operational efficiency

This project is built using ReactJs, Redux, Formik, Material UI, Google Map, react-chartjs-2 as frontend stack following the microfrontend architecture, webpack as a build tool and python Django framework on backend

- Designed and led the development of a real-time fleet tracking dashboard for operators and admins using React, Material UI

- Developed new UI components, enhancing usability and ensuring a seamless user experience and responsive UI
- Implemented Google Maps clustering to optimize rendering performance with large datasets
- Improved the process for publishing the npm package for each module of micro-frontend after new feature gets merged in git master branch
- Reduced API calls, improving load times and data efficiency
- Participated in requirement gathering and API spec discussions, providing architectural insights
- Integrated react-chartjs to create dynamic and visually appealing data visualizations for fleet metrics and utilization trends
- Improved real-time updates for better tracking accuracy and data consistency
- Coordinated with QA teams to ensure high-quality releases and provided post deployment support

## Education

---

### **Pune University**

*Bachelor of Engineering in Information Technology*

*Year: 2008 - 2012*
